

# Don't Get Compromised 10 Common Data Protection Mistakes That Leave Organizations Exposed

Protecting sensitive data isn't optional. These are the most common—and most dangerous—mistakes that lead to breaches.

- **No multi-factor authentication**
- **Unmonitored endpoints**
- **Weak access controls**
- **Outdated security patches**
- **Infrequent backups**
- **No incident response plan**
- **Data stored unencrypted**
- **Vendor lock-in without contingency**
- **No annual audit**
